16.2 How to update a user's access	

1. Getting Access to FIRST

1.1 FIRST System Access Activation (FIRST Link | go/firstctqrm)

Associates who complete the required UP4Growth training (DQT_Clinical Trial Quality Risk Management curriculum) will then need to open a SNOW ticket for FIRST account activation.

1.1.1 FIRST Application Access Request by SNOW ticketing process

Follow below steps to raise SNOW Access Request:

To access Service Now, type “**go/snow**” in your browser

OR copy-paste below in your browser and save to favorites

https://novartiscorp.service-now.com/nav_to.do?uri=%2Fhome.do%3F

1. Following screen will appear, select >> “IT Service Catalog”

Service Catalog window opens, search for “DIT_FIRST” in the search box as shown below:

- A. Select **Request Type** as “Application User Account Management”
- B. Select **User Access Mgmt** as “New”
- C. Enter “**Description/special instructions**” as specified in the screenshot below including user 5-2-1 and role type requested
- D. Click on Submit

Note: Once SNOW request is submitted, FIRST IT support team will activate the account, grant access where possible or update requester on the ticket status via email.

Note: Study Lead access is granted automatically per the trial-specific WP Manager assignment in Horizon. All other trial-level access (i.e., Study Lead delegate and CTT user) is granted by the Study Lead in FIRST Admin Controls.

DIT_FIRST

The Risk Register tool is a web-based application that will be used by the Clinical Trial Team (CTT) to ensure proper management and oversight of risks during clinical trial conduct.

 Add attachments

Review Section 1.2 through 1.7 for specific access rights.

Please use Google Chrome or Microsoft Edge as the performance is much better than Internet Explorer. The go/firstctqrm command will not work in Google Chrome.

1.2 Trial Register Access

- **Study Lead** will be able to access their studies automatically in FIRST based on Horizon Work Package manager assignment. If Study Lead is different than the 'Work Package Manager' assigned in Horizon, please have Horizon updated and access will be granted automatically.
- CTT users will automatically be granted write-access to trial registers based on the CTT membership list in IMPACT.
- Study Lead should be able to grant access to **Study Lead Delegate and all CTT members** who have completed prerequisite training to their trial(s) within FIRST through ADMIN CONTROLS. If Study Lead Delegate/CTT User roles do not have access to their respective trials reach out to Study Lead to request access.
- External user role: restricted access to a specific trial risk register (prohibited from viewing any other area of FIRST).

1.3 Project Register Access

- **Global Team Program Head** (GTPH) will be able to access their projects automatically in FIRST based on 'Trial Management Representative' assignment for the project in Horizon. If GTPH is different than the 'Trial Management Representative' assigned in Horizon, please have Horizon updated and access will then be granted automatically. If not feasible, open a SNOW ticket to request appropriate access (process outlined in [Section 2](#)).
- GTPH will have access to ADMIN CONTROLS to their project(s) and can grant access to the users who have completed the prerequisite trainings at any time within FIRST or the users requiring Project level access can request via the SNOW ticketing process outlined in [Section 2](#).

- GTPH equivalent roles across divisions will also have access to the project-level. Access will be granted following training completion and requesting access via SNOW ticketing process.
- **Clinical Supply Project Lead** (CSPL): request project-level access from the GTPH already having access or via the SNOW ticketing process outlined in [Section 2](#).

NOTE: SNOW ticket is a one-time activity.

1.4 Supplier Access

- **ESP Relationship Lead** will be able to access suppliers automatically in FIRST based on the [FIRST RL assignment list](#) owned by GDO External Development Operations or via the SNOW ticketing process outlined in [Section 2](#).
 - o ESP Relationship Lead will have access to ADMIN CONTROLS to supplier and can add user access at any time within FIRST.

NOTE: SNOW ticket is a one-time activity.

1.5 Process/System Access

- Register owner access to a specific process or system register is granted in 1 of 2 ways.
 - a. Via the SNOW ticketing process outlines in [Section 2](#).
 - b. 'Process owner' access can also be granted by another Process Owner or the Process Coordinator via Admin Controls area of FIRST.

1.6 Read-Only Access

Read-Only roles (e.g., Process Control Manager, Clinical QA, Global Program Clinical Head, Development Unit Head, etc.)

- User will need to raise Read-Only access request using the SNOW ticketing process outlined in [Section 2](#) following FIRST account activation. After the ticket is processed, user will have read-only access to ALL the entities in FIRST.

NOTE: SNOW ticket is a one-time activity.

Users can request access for multiple roles based on their requirements (e.g. Clinical QA can request for CTT user access to a specific trial that they are managing along with Read Only user access to other trials and entities).

1.7 Access to Reports, Trends, and Patterns

After finishing the prerequisite trainings and getting system access to FIRST, there may be a delay of 48 hours to get access to the Reports, Trends and Patterns section of the application.

2. Risk/Issue Register Types

FIRST has five different risk/issue register types: trial (CTT members), supplier (ESP Relationship Lead), project (GTPH and CSPL), process/system (Process and System Owners) and country (TMO Country Organizations). The country register is currently not implemented.

It is possible to push a risk/issue from one register type to another (exception Process/System register).

- When a new entry (risk/issue) is created in the supplier or project register, it can be rolled down to one or more potentially affected trials, where the entry will be put in the trial level waiting Room for a Study Lead or Delegate to Accept into the Trial Level Register or Archive.
- When a risk/issue is rolled up from the Trial Level, it is put into the supplier or project register waiting room, for the manager of that entity (ESP Relationship Lead, GTPH or CSPL) to accept or archive into the respective register.

Entries that are archived, can be un-archived at any point in time.

2.1 Trial Level Registry

All global clinical trials have a risk/issue register accessible for clinical trial teams. Each trial starts in the 'survey' area and then submits to 'register' at time of final protocol.

2.2 Supplier Level Registry

Each supplier managed by an ESP Relationship Lead (RL) will have a supplier-specific risk/issue registry.

- a) ESP RL will manage a supplier-specific risk/issue registry (e.g., Cenduit, etc.). The responsible RLs have access to create or edit a risk/issue and add associated mitigation actions at any time.

- b) Purpose of the Supplier Level Registry:
- Systematically record operational and supplier-specific risks and issues.
 - Allows for transparency to trial team(s) of known supplier risks and issues by ESP RL; also shares supplier-level mitigation activities and ability to suggest team assessment based on trial-level specifics
 - Shows applicable rolled up risks and issues from trial level for assessment of impact on other trials using that same supplier
- c) Frequency of use: as needed, when risk/issue received from roll up and minimally monthly (or following ERMT meeting)
- d) Example of Supplier Level Risk:
*Supplier X, the sole service provider for Z, is planned for requalification in Jun-2020 which **may lead to** inability to use this vendor (if requalification fails or is delayed) **resulting in** inability to complete assessments in 3 trials.*
- e) Example of Supplier Level Issue:
*Tablets for ePROs were coded incorrectly **led to** an incomplete audit trail **resulting in** gaps in data and lack of data integrity across 5 trials*

Handling of Trial-Level Supplier Risks/Issues

Trial risks/issues noted at the supplier level will continue to be managed at the trial level. The EDO Supplier Lead, as a member of the CTT, will perform data entry in FIRST for supplier activities affecting a trial. If there is no ESP Supplier Lead assigned or has transitioned off the trial, the Study Lead / delegate will be responsible for managing the data in FIRST.

2.3 Project Level Registry

Each project (compound + indication; example ABL001A) will now be able to have a project-specific risk/issue registry.

- a) At a Project Level, GTPH or CSPL has access to create or edit a risk/issue.

- b) Purpose of the Project Level Registry:
- Systematically record operational risks and issues learned during program/project team (e.g., GPT, GCT) discussions and provide to trial team(s); provides transparency around program/project-level mitigation activities and ability to suggest team assessment based on trial-level specifics; it is intended that these risks and issues would be rolled down to one or more trial
 - Shows rolled up risks and issues from trial level for assessment of impact on other trials across the project
- c) Frequency of use: as needed and when risk/issue received from roll up; minimally quarterly
- d) Example of Project Level Risk:
The finite manufacturing capacity for CTL019 may lead to recruitment limitations resulting in ability to treat patients across trials
- e) Example of Project Level Issue:
A lack of the oral formulation has led to recruitment only open in one cohort of the trial resulting in recruitment delays for both pediatric and the rollover trials

2.4 Process/System Registry

Each Global Development Operations (GDO) process and (compound + indication; example ABL001A) and system will now be able to have a specific risk/issue registry. This register type is stand-alone, meaning you cannot roll up/down to or from it.

- a) At a Process register level, Process Owners and Process Coordinators have access to create or edit a risk/issue.

R/I/A = Risk / Issue / Action

- b) Purpose of the Process and System Level Registry:

- Systematically record process- and system-related operational risks and issues
- c) Frequency of use: as needed
- d) Example of System Level Risk:
Tampering with user 521 by hackers may lead to unlawful data changes resulting in data integrity concerns.
- e) Example of Process Level Issue:
A lack of full documentation has led to four CTA rejections in 3 months resulting in recruitment delays in multiple trials.

2.5 Country Level Registry

Currently not in use

3. Homepage Dashboard

Ref	Field/Button	Description
1	Quick access panel	From this panel, user can quickly go back to the homepage or navigate to the system's sections: Summary Dashboard, Waiting Room, Risk/Issue Survey, Risk/Issue Register, Reports/Trends & Notifications, Transactional Audit Reports, and Admin Controls (only visible to user while in an entity and value to which they have Study Lead or other 'owner-level access')
2	Select Entity (i.e., risk/issue register type)	User must select at which entity level to be working: • Select Trial + access level (SL, SL Delegate, CTT) • Project • Country (not used) • Supplier • Process/System • All* <i>* User must avoid selecting option "All" as it will take a considerable amount of time for the system to retrieve data from all entities.</i>
3	Select Value	Based on the selections from the "Select Entity" field, this field allows user to select the value (specific trial, project, or supplier) to view. User will not be able to navigate to the Survey or the Register without selecting a value.
4	Copy Risk/Issue	This option allows user to copy risks, issues, and actions from other entities. See page 21 of this document for more guidance
5	Tasks Assigned Summary	On this section, user can get a summarized view of tasks assigned to them in 3 sections: Actions Opened per Risk/Issue, Actions Open Beyond Due Date, and Risks/Issues in the waiting room. The data that appears in this section is clickable and user can navigate to each specific entry by clicking on it.
6	Notifications and Alerts	On this section, user can see a list of system notifications plus the alerts that user has subscribed. See page 44 of this document for more guidance.
7	Subscriptions	Provides ability to subscribe for a series of different types of alerts across all register types

4. Trial-Level Survey

To access the Risk/Issue Survey (only applicable at trial-level), click on the icon on the Quick Access Bar.

Risk/Issue Survey Landing Page

Ref	Field/Button	Description																																																																						
1	Trial ID	This field shows the ID of the trial register displayed. It also allows user to switch to other trials from the dropdown list of values.																																																																						
2	Legends	This section provides a summary of the metrics on the Risk/Issue Survey: • # of open risks • # of closed risks • # of open issues • # of closed issues • # of open actions • # of closed actions • # of past due actions These are NOT clickable fields																																																																						
3	Type of Entry	These buttons allow user to view the entries by type (risks and issues, risks, issues and risks converted to issues). User can navigate from one to another by clicking on these buttons.																																																																						
4	Search bar	User can find a specific entry by searching for it by wording or ID																																																																						
5	CTT Meeting (export to excel)	User can export trial specific information from the Survey to excel <table><tr><th></th><th>A</th><th>B</th><th>C</th><th>D</th><th>E</th><th></th></tr><tr><td>1</td><td>Trial</td><td>Record ID</td><td>Risk Details</td><td>Status</td><td>Category</td><td></td></tr><tr><td>2</td><td>CAC2885G1301</td><td>R007</td><td>Entered On: 20-FEB-2019,Enter Open - Actions Pending</td><td>Safety - IMP/Class profile</td><td>root</td><td></td></tr><tr><td>3</td><td>CAC2885G1301</td><td>R008</td><td>Entered On: 25-FEB-2019,Enter Open - Actions Pending</td><td>Safety - IMP Unknown infc</td><td>Risk</td><td></td></tr><tr><td>4</td><td>CAC2885G1301</td><td>R006</td><td>Entered On: 09-OCT-2018,Enter Open - No Actions Enterec</td><td>Safety - IMP/Class profile</td><td>jhfg</td><td></td></tr><tr><td>5</td><td>CAC2885G1301</td><td>R005</td><td>Entered On: 25-APR-2018,Entei Open - No Actions Enterec</td><td>Safety - IMP/Class profile</td><td>Test</td><td></td></tr><tr><td>6</td><td>CAC2885G1301</td><td>R004</td><td>Entered On: 18-JUN-2018,Enter Open - No Actions Enterec</td><td>Operational Complexity</td><td>last</td><td></td></tr><tr><td>7</td><td>CAC2885G1301</td><td>R003</td><td>Entered On: 20-APR-2018,Entei Open - No Actions Enterec</td><td>Safety - Study Assessment</td><td>test</td><td></td></tr><tr><td>8</td><td>CAC2885G1301</td><td>R002</td><td>Entered On: 25-APR-2018,Entei Open - No Actions Enterec</td><td>Patient Population</td><td>Corr</td><td></td></tr><tr><td>9</td><td>CAC2885G1301</td><td>R001</td><td>Entered On: 25-APR-2018,Entei Open - No Actions Enterec</td><td>Patient Population</td><td>prev</td><td></td></tr></table>		A	B	C	D	E		1	Trial	Record ID	Risk Details	Status	Category		2	CAC2885G1301	R007	Entered On: 20-FEB-2019,Enter Open - Actions Pending	Safety - IMP/Class profile	root		3	CAC2885G1301	R008	Entered On: 25-FEB-2019,Enter Open - Actions Pending	Safety - IMP Unknown infc	Risk		4	CAC2885G1301	R006	Entered On: 09-OCT-2018,Enter Open - No Actions Enterec	Safety - IMP/Class profile	jhfg		5	CAC2885G1301	R005	Entered On: 25-APR-2018,Entei Open - No Actions Enterec	Safety - IMP/Class profile	Test		6	CAC2885G1301	R004	Entered On: 18-JUN-2018,Enter Open - No Actions Enterec	Operational Complexity	last		7	CAC2885G1301	R003	Entered On: 20-APR-2018,Entei Open - No Actions Enterec	Safety - Study Assessment	test		8	CAC2885G1301	R002	Entered On: 25-APR-2018,Entei Open - No Actions Enterec	Patient Population	Corr		9	CAC2885G1301	R001	Entered On: 25-APR-2018,Entei Open - No Actions Enterec	Patient Population	prev	
	A	B	C	D	E

9	CAC2885G1301	R001	Entered On: 25-APR-2018,Entei Open - No Actions Enterec	Patient Population	prev																																																																			
6	CT QRM Report (export to excel)	User can export trial-specific information from the Survey to excel in the format that can be viewed in a minimized width																																																																						
7	Categories	• At a trial-level, there are multiple 16 categories (related to process) to assess risks or issues and for each, there is a customized list of sub-categories. Category should be selected based on the event (i.e., not the root cause).																																																																						

		- Categories sort by default first by 'new categories' which were newly created or edited followed by 'old categories' that have risks/issues behind them. User has open to switch sorting from 'Latest' to 'A-Z' which would sort the categories by alphabetical order. - Categories in bold are those for which there are already entries of risks and issues. Categories that are not in bold are those for which there have been no entries yet
8	Review Complete Button	The 'Review Complete' button is a user specific feature to indicate when review of survey risks/issues are reviewed.
9	Filters	- The survey also allows the user to filter the entries by creator, status, action owner, risk or issue score and action status. - This field is collapsible, so user can make the section appear and disappear by clicking on the arrow to the left of the word "filters".
10	Risk/Issue Entry	- This section shows the complete risk/issue description: Risk Statement, Status, Owner, Classification Score, Risk Control Strategy (Accept, Mitigate, Avoid), creator, date of creation and Risk/Issue Score. - User can flag a particular entry and have it appear at the top of the list. - This field is expandable, by clicking on the risk/issue statement itself, in order for user to be able to see the complete risk/issue statement and any associated mitigation action. - Risks/issues are sorted first by flag, then lists open/re-open by score (high to low) and then closed by score (high to low).
11	+ New Risk/Issue	To add a new risk/issue, user must click on this button. See page 16, "<i>How to Create a New Risk/Issue</i>," for further guidance
12	Submit Register to	This button is only visible to the Study Lead or Study Lead Delegate and allows users to convert the agreed survey risks and issues and associated actions to the register mode. Once this is selected, there is no option to go back to the survey mode.

5. Register

To access the Risk/Issue Register, select the Entity and Value and click on the icon on the Quick Access Bar:

Register

The layout of the Register is very similar to the Survey; however, there are three important differences:

1. The categories vary by entity
2. The categories are only viewable at a Trial Level
3. The Submit to Register button is no longer viewable to the SL or Delegate

5.1 Risk/Issue Register Landing Page

The register at a parent level will not show the list of categories on the left side of the screen.

The screenshot displays the Risk/Issue Register Landing Page. At the top, there's a navigation bar with a menu icon, a dropdown for 'IQVIA (Quintiles and IMS Health)', and a 'Legends' section showing metrics: Open Risks: 12, Closed Risks: 1, Open Issues: 11, Closed Issues: 1, Open Actions: 9, Closed Actions: 2, Past Due Actions: 7. Below this is a breadcrumb 'Home > Supplier - Risk/Issue Register' and a 'Risks and Issues' section with buttons for 'Risks', 'Issues', and 'Risks Converted to Issues'. A search bar and an 'Export to Excel' button are also present. The main area features a 'Filter' section with dropdowns for 'All - Creator', 'All - Status', 'All - Action Owner', 'All - Score', 'Primary Service', and 'All - Action Status'. Below the filters are several risk/issue entries, each with a description, owner, and action status. The page is numbered 'Showing 1 to 10 of 25 results'.

Ref	Field/Button	Description																																																																																																																														
1	Legends	This section provides a summary of the metrics on that Risk/Issue Register: • # of open risks • # of closed risks • # of open issues • # of closed issues • # of open actions • # of closed actions • # of past due actions These are NOT clickable fields																																																																																																																														
2	Type of Entry	This set of buttons allows user to view the entries by type (risks and issues, risks, issues and risks converted to issues). User can navigate from one to another by clicking on these buttons.																																																																																																																														
3	Search bar	User can find a specific entry by searching for it by wording or risk/issue ID																																																																																																																														
4	Export to excel	User can export trial specific information from the Survey to excel <table><tr><th>Supplier</th><th>Record ID</th><th>Entered On</th><th>Entered By</th><th>Probability</th><th>Impact</th><th>Detectability</th><th>Mitigation Strategy</th><th>Status</th></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R005</td><td>08-JUL-2021</td><td>Avinash Chaudhary</td><td>High</td><td>High</td><td>Low</td><td>Mitigate</td><td>Re-Open</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R012</td><td>12-DEC-2021</td><td>Rebecca Wolf</td><td>High</td><td>High</td><td>Medium</td><td>Mitigate</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R008</td><td>29-NOV-2021</td><td>Rebecca Wolf</td><td>High</td><td>High</td><td>Medium</td><td>Avoid</td><td>Open - Issue(s) Occurred</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R001</td><td>19-JUN-2020</td><td>Chandan Ramnath Patare</td><td>Medium</td><td>High</td><td>Low</td><td>Avoid</td><td>Re-Open</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R011</td><td>09-DEC-2021</td><td>Rebecca Wolf</td><td>High</td><td>Low</td><td>Low</td><td>Avoid</td><td>Closed</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R010</td><td>07-DEC-2021</td><td>Rebecca Wolf</td><td>Medium</td><td>Medium</td><td>Medium</td><td>Avoid</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R013</td><td>15-DEC-2021</td><td>Rebecca Wolf</td><td>Medium</td><td>High</td><td>High</td><td>Accept</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R009</td><td>06-DEC-2021</td><td>Rebecca Wolf</td><td>High</td><td>Low</td><td>Medium</td><td>Mitigate</td><td>Open - Issue(s) Occurred</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R007</td><td>14-JUL-2021</td><td>Rebecca Wolf</td><td>Low</td><td>Medium</td><td>Low</td><td>Mitigate</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R003</td><td>30-JUN-2021</td><td>Rebecca Wolf</td><td>Medium</td><td>Low</td><td>Low</td><td>Avoid</td><td>Open - Issue(s) Occurred</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R004</td><td>01-JUL-2021</td><td>Rebecca Wolf</td><td>Medium</td><td>Medium</td><td>High</td><td>Accept</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R006</td><td>08-JUL-2021</td><td>Rebecca Wolf</td><td>Low</td><td>Low</td><td>High</td><td>Accept</td><td>Open - No Actions Entered</td></tr><tr><td>IQVIA (Quintiles and IMS Health)</td><td>R002</td><td>23-JUN-2020</td><td>Chandan Ramnath Patare</td><td>Low</td><td>Low</td><td>High</td><td>Mitigate</td><td>Open - Actions Pending</td></tr></table>	Supplier	Record ID	Entered On	Entered By	Probability	Impact	Detectability	Mitigation Strategy	Status	IQVIA (Quintiles and IMS Health)	R005	08-JUL-2021	Avinash Chaudhary	High	High	Low	Mitigate	Re-Open	IQVIA (Quintiles and IMS Health)	R012	12-DEC-2021	Rebecca Wolf	High	High	Medium	Mitigate	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R008	29-NOV-2021	Rebecca Wolf	High	High	Medium	Avoid	Open - Issue(s) Occurred	IQVIA (Quintiles and IMS Health)	R001	19-JUN-2020	Chandan Ramnath Patare	Medium	High	Low	Avoid	Re-Open	IQVIA (Quintiles and IMS Health)	R011	09-DEC-2021	Rebecca Wolf	High	Low	Low	Avoid	Closed	IQVIA (Quintiles and IMS Health)	R010	07-DEC-2021	Rebecca Wolf	Medium	Medium	Medium	Avoid	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R013	15-DEC-2021	Rebecca Wolf	Medium	High	High	Accept	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R009	06-DEC-2021	Rebecca Wolf	High	Low	Medium	Mitigate	Open - Issue(s) Occurred	IQVIA (Quintiles and IMS Health)	R007	14-JUL-2021	Rebecca Wolf	Low	Medium	Low	Mitigate	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R003	30-JUN-2021	Rebecca Wolf	Medium	Low	Low	Avoid	Open - Issue(s) Occurred	IQVIA (Quintiles and IMS Health)	R004	01-JUL-2021	Rebecca Wolf	Medium	Medium	High	Accept	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R006	08-JUL-2021	Rebecca Wolf	Low	Low	High	Accept	Open - No Actions Entered	IQVIA (Quintiles and IMS Health)	R002	23-JUN-2020	Chandan Ramnath Patare	Low	Low	High	Mitigate	Open - Actions Pending

IQVIA (Quintiles and IMS Health)	R006	08-JUL-2021	Rebecca Wolf	Low	Low	High	Accept	Open - No Actions Entered																																																																																																																								
IQVIA (Quintiles and IMS Health)	R002	23-JUN-2020	Chandan Ramnath Patare	Low	Low	High	Mitigate	Open - Actions Pending																																																																																																																								
5	Filters	This field is collapsible and user can make it disappear by clicking on the arrow to the left of the word “Filter” • User can filter the entries by Creator, Status, Action Owner, Score, Primary Service (applicable for Supplier register only) and Action Status. Filters can be reset by clicking on the round arrow to the right of the filters section																																																																																																																														
6	+New Risk/Issue	Users click on this button to start a new risk/issue • See section “How to enter a new risk/Issue” of this guide for more details																																																																																																																														
7	Risk/Issue Entry	• This section shows risk/issue description: Risk/Issue ID and Statement, Status, Owner, Classification and overall Score, Risk Control Strategy (Accept, Mitigate, Avoid), creator, date of creation and primary service (applicable to supplier register only). • User can Flag a particular entry and have it appear at the top of the list. • This field is expandable by clicking on the risk/issue statement itself. User will then see the complete risk/issue statement and any associated mitigation action.																																																																																																																														

8	Roll Up/Down/Over	When a risk/issue has been rolled up, down, or over*, an arrow icon will appear to the right of each risk/issue ID. *Risk/Issues can only be rolled over at a Project level (from one project to another) Icons for Rolled Entries:  If an entry has been rolled up, down, or over (only at Project Level), user can view source entity value by hovering the cursor over the arrow icon: 
---	--------------------------	--

5.2 Risk/Issue Categories

Categories in the Risk/Issue Register are different for each entity (not applicable for process/system register):

Entity	Categories
Trial	Protocol & ICF Development, Database Development, Data Acquisition, Data Review & Cleaning, Site Start-Up, Maintenance & Close-out, Trial Participant Enrollment, Treatment & Discontinuation, Blinding/Unblinding, Safety (Operational), Trial Participant Safety, Drug Supply Provision, Distribution & Management, Ancillary Supplier, Trial Master File, Statistical Programming, Analysis & Reporting, Clinical Study Reporting, Publishing & Disclosure, Trial Budget * There are also sub-categories for each of these process-related categories
Supplier	N/A; at this level, individual risks/issues are associated to a primary service. The list of primary services is managed by GDO External Development Operations.
Project	Clinical, Safety, Regulatory, Operational, and Technical

5.3 Risk/Issue Sub-Processes, Risk/Issue Areas and Applicable Areas

Only applicable for process/system register.

Entity / Field	Location
Process Register	List of values managed via Sharepoint list located here
Sub-Processes	List of values managed via Sharepoint list located here (applicable for process registers only)
Risk/Issue Areas (Process)	List of values managed via Sharepoint list located here (applicable for process registers only)
System Register	List of values managed by CS&I
Risk/Issue Areas (System)	List of values managed via Sharepoint list located here (applicable for system registers only)
Applicable Areas (Process + System)	ClinOps, ClinSciences, NIBR, SandozBio, GMA, GDD

6. Waiting Room

It is not required to select an entity or a value to access the waiting room, user can click directly on the corresponding button. The number of new entries waiting will be shown in red.

The waiting room is user-specific, and thus, user will only view the risks/issues that are waiting for them to action.

All team members have access to the **waiting room**; however, if a team member does not have any risks/issues to action, the Waiting Room will remain read only.

Only Study Leads or Study Lead Delegates have access to accept or archive a risk/issue from the Waiting Room at a trial level.

At the parent-level, all team members have access to accept/archive risks/issues from the Waiting Room for their respective entity. This does not apply to process/system register.

At a parent-level (Project and Supplier) the Waiting Room is used only for entries that are being rolled up, down, or over (Project Level), not for initial entry.

At the trial-level, the Waiting Room allows the Study Lead/delegate to review new or edited risks/issues created by CTT members in the register.

Waiting Room Landing Page

Ref	Field/Button	Description																																																	
1	Type of entry	User can click on these tabs to view a discrete list of entries in the waiting room: risks, issues, and risk/issues in the archive. From the Archive Tab, entity manager can retrieve an archived risk/issue and un-archive by clicking on the check mark icon to the right of the entry: 																																																	
2	Search bar	User can search for specific risk/issue by typing in this field the Risk/Issue ID, Values (i.e. Trial ID), or words in the risk/issue statement.																																																	
3	Entities	User can navigate between register types in the waiting rooms																																																	
4	R/I Survey or Register	User can click on Risk/Issue survey to get a full view of the entries waiting to be accepted into the Survey (only available at Trial Level) or can click on Risk/Issue Register for a full view of entries waiting to be accepted into the R/I Register.																																																	
5	Export to Excel	The content of the waiting room can be exported to an Excel Spreadsheet																																																	
		<table><tr><th>Trial</th><th>Record ID</th><th>Risk Details</th><th>Status</th><th>Category</th><th>Risk Statement</th><th># Actions</th></tr><tr><td>CABL001A2104</td><td>R007</td><td>Entered On: 19-MAR-2020, Open -</td><td>Actions Pending</td><td>Study Complexity</td><td>2-part study leading to lea</td><td></td></tr><tr><td>CACZ885DDE03T</td><td>R007</td><td>Entered On: 06-FEB-2020, E Open -</td><td>Issue(s) Occurred</td><td>Study Complexity</td><td>qwdqedasdasdasdasdas</td><td></td></tr><tr><td>CACZ885DDE03T</td><td>R005</td><td>Entered On: 03-FEB-2020, E Open -</td><td>Issue(s) Occurred</td><td>Safety - IMP/Class profile</td><td>Sed ut persiciatis unde oi</td><td></td></tr><tr><td>CACZ885DDE03T</td><td>R005</td><td>Entered On: 29-JAN-2020, E Open -</td><td>Issue(s) Occurred</td><td>Supplier</td><td>Risk leading to Lead result</td><td></td></tr><tr><td>CACZ885DDE03T</td><td>R002</td><td>Entered On: 29-JAN-2020, E Closed</td><td></td><td>Blinding</td><td>risk02 leading to 02 resulti</td><td></td></tr><tr><td>CACZ885DDE03T</td><td>R024</td><td>Entered On: 29-JAN-2020, E Open -</td><td>Issue(s) Occurred</td><td>Other</td><td>assign act own01 leading t</td><td></td></tr></table>	Trial	Record ID	Risk Details	Status	Category	Risk Statement	# Actions	CABL001A2104	R007	Entered On: 19-MAR-2020, Open -	Actions Pending	Study Complexity	2-part study leading to lea		CACZ885DDE03T	R007	Entered On: 06-FEB-2020, E Open -	Issue(s) Occurred	Study Complexity	qwdqedasdasdasdasdas		CACZ885DDE03T	R005	Entered On: 03-FEB-2020, E Open -	Issue(s) Occurred	Safety - IMP/Class profile	Sed ut persiciatis unde oi		CACZ885DDE03T	R005	Entered On: 29-JAN-2020, E Open -	Issue(s) Occurred	Supplier	Risk leading to Lead result		CACZ885DDE03T	R002	Entered On: 29-JAN-2020, E Closed		Blinding	risk02 leading to 02 resulti		CACZ885DDE03T	R024	Entered On: 29-JAN-2020, E Open -	Issue(s) Occurred	Other	assign act own01 leading t

6	Sort by	User can sort entries in the waiting room by score: Low, Medium, High																																																	

		
7	Entry Icons	To the right of the Risk/Issue ID there can be a pencil icon:  This icon indicates that the entry was edited, and is waiting for SL approval of those edits User can hover over the entry in order to see a detailed description of the old entry vs the edited entry: 
8	R/I Entry	This field allows user to view a full description of the risk/issue as it is expandable when the risk/issue statement is clicked.
9	Classification	When a risk/issue classification has been changed, the fields for P (Probability), I (Impact), and D (Detectability) will appear in blue, and Old + New scores will be visible upon user hovering the cursor over the blue markers.  If the score for Probability, Impact, and Detectability was not edited, then the entry will be shown with the regular color-coding: Green for Low; Yellow for Medium; and Orange for High. 
10	SL Action	The only role that can action inside the waiting room is the entity manager, for their respective entry The entity manager can either accept the entry into the corresponding register or archive it.  Upon archiving an entry, user will be prompted to confirm the action and type in a justification for archival: 

7. How to Create a New Risk/Issue

This process starts in the **Risk/Issue Survey or Register** screen.

- From the **Home Page**, select the appropriate **entity (1)** (Trial, Project, or Supplier), avoid selecting the “All” checkbox, as this will delay the download of data. Then select a **Value (2)** from the drop down list. This will enable either the **Survey** or the **Register**, depending of the phase of the trial or entity:

NOTE: For parent-level, all risks/issues will be initiated from the Register.

- From the main menu, click on the Survey or Register, depending on the stage of the trial:
*Risk/Issue Survey is only accessible at Trial Level

- Click on the +New Risk/Issue button:

- Select the type of entry from the dropdown

- The “Select Status” field will appear grayed out, and the entry’s status will be set as “New” by default

- In the **Risk/Issue Statement**, section enter the proper information in each field: **Risk**, ‘**Leading**’ to (**event**), and ‘**Resulting in**’ (**outcome**):

- For risk statements: Risk (**root cause**) + may lead to (**event**) + resulting in (**impact**)
- For issue statements: **Issue** + led to (**event**) + resulting in (**impact**)

NOTE: The words “may lead to” / “led to” and “resulting in” are added to the risk/issue statement automatically

NOTE: Patient/Subject numbers are **NOT** to be added to risk/issue statements nor actions due to privacy concerns

Use the “Preview” icon to view the consolidated Risk/Issue statement

- d) When appropriate, tick the ‘Supplier Related’ tick box to indicate the ‘Supplier’ and ‘Primary Service’ related to the risk/issue (applicable only at the trial level):

☒ Supplier Related? ⓘ

Supplier *

Gentris Corporation x v

Primary Service *

Bioanalytical Laboratory x v

Sub-Type

Select Sub-Type v

NOTE: There are 4 primary services ('Monitoring', 'Laboratory Services – Central', 'eCOA / ePRO', 'IRT') that also require a 'Sub-Type'. When selected, the 'Sub Type' field will be activated and mandated for completion.

- e) For trial and project level registers, select the category based on the corresponding process event (not the root cause; applicable for trial and project level only):

Trial Category Snapshot:

Risk/Issue Event Category *

Select Risk/Issue Event Category v

Ancillary supplies

Blinding /Unblinding

Clinical study reporting, publishing and disclosure

Data acquisition

Data review and cleaning

Database development

Protocol and ICF development

Safety (operational)

Site start-up, maintenance and close-out

Project Category Snapshot:

Risk/Issue Event Category * ⓘ

Select Risk/Issue Event Category v

Clinical

Safety

Regulatory

Operational

Technical

NOTE: Each entity has a different set of categories; this example shows the categories for Trial.

- f) For trial registers, select the sub-category based on the most relevant event for the risk/issue:

Risk/Issue Event Sub-Category *

Select Risk/Issue Event Sub-Category v

Data transfer

Other

Trial participant data entry

Vendor data entry

Site data entry

g) For supplier level registers, select the one or more primary services applicable:

Primary Service *

Select Primary Service

- Archiving, Document / TMF Management
- Auditing Services
- Bioanalytical Laboratory
- Biomarker
- Biomarker Laboratory
- Biosensors/ Wearable devices
- Biostatistics and Statistical Reporting / Programming Services
- Case Report Forms (CRF) Printing
- Control IPB

h) For some Primary Services, a Sub-Type is also required and should be selected as appropriate:

Sub-Type *

Select Sub-Type

- Protocol Compliance
- AEs/SAEs (PV)
- Informed Consent Process
- PI / Site Personnel Oversight
- IMP
- Document Management (Essential Documents/IF)
- Data Management (eCRF/SD/IXRS)
- Laboratory and Other Vendor
- Equipment/Facilities

i) For Process registers, select the Sub-Process as appropriate:

Sub-Process *

Select Sub-Process

- Committees Management(AC,SC,DMC)
- Data Review & Urgent Safety Measures Management
- PD Management

j) For Process and System registers, select the Risk/Issue Area associated to the process/system register as appropriate:

Risk/Issue Area *

Select Risk/Issue Area

- Compliance with internal procedures
- Compliance with external regulatory requirements
- Oversight, governance & control
- Gaps in design
- Document content/template
- Associated systems/tools
- Sponsor oversight & control for third parties
- Investigator site documentation practice
- Integration & Knowledge transfer during M&A / In-licensing

k) For Process/System registers, select the appropriate Applicable Area per division:

Applicable Area *

Select Applicable Area

- ClinOps
- ClinScience
- NIBR
- Sandoz Bio
- GMA
- GDD

l) Select the one or more impact categories as appropriate. To remove from selection, click the 'x' to the right of the value.

Impact Category (Select all that apply) *

Budget x Quality_data integrity x Timelines x | x v

- Quality_compliance
- Quality_novartis reputation
- Quality_others
- Quality_study Participant safety, rights and well-being

m) In the **Classification** section, select the level for **Probability**, **Impact**, and **Detectability**. Additionally, select the **Risk Control Strategy**. (refer to SOP-7042234 CTQRM for definitions on these concepts)

Classification 

Probability v Impact v Detectability v Mitigation Strategy v

NOTE: Issues only have the impact classification available

The icon next to the word "Classification" will display guidance around how to score for each dimension:

Classification

	Probability	Impact	Detectability
	Likelihood that the risk will occur	The adverse consequence(s) of risk occurrence on quality, timelines and/or budget	Ability to detect the risk in time before it becomes an issue
High	The risk is very likely to occur	The risk occurrence would have significant adverse consequence(s) on quality, timelines and/or budget	Risk can be easily detected in real time
Medium	The risk is likely to occur	The risk occurrence would have moderate adverse consequence(s) on quality, timelines and/or budget	Risk can be detected but not in real time
Low	The risk is unlikely to occur	The risk occurrence would have minor adverse consequence(s) on quality, timelines and/or budget	Risk is very difficult to detect or may not be detected

In instances where multiple impacts are identified, classify based on category w/ highest impact

- n) If user is entering a new issue or if a risk is converted into an issue, they must also indicate if entry is related to a Quality Issue, and, if so, enter the Quality Issue ID:

☐ Related to Quality Issue

Quality Issue ID

Enter Quality Issue ID

NOTE: If there is an Quality Issue ID associated to the issue, from a documentation perspective, issue should be managed from Quality Issue so as to not duplicate data with FIRST. The issue should be closed out in FIRST upon closure in the quality management system.

- o) For issues, it is required to indicate the date for which the issue occurred. Select the date from the calendar picker.

Issue Occurrence Date *

Select Issue Occurrence Date

- p) If user is entering a new risk or issue, indicate if it related to a Quality Tolerance Limit (applicable at trial level only):

☐ Related to Quality Tolerance Limit (QTL)?

- q) User must enter a Risk/Issue owner who is accountable to follow this entry through to completion.
* This will not trigger a required action for that owner.

Risk/Issue Owner *

Risk/Issue Owner Name

- r) Next step, user can click on “**Submit**” button and save the entry with no actions. The risk/issue will appear in the Survey or Registry with a status of “**Open, no actions entered**”.

NOTE: Actions in the “Action Log” should be added at the entity level (i.e., if Risk/Issue is being entered at a Trial Level, all associated actions should also be managed at a Trial Level)

5. In the Action Log, complete the following:

1. **Start date:** will be set to the current date by default and thus will appear grayed out to the user
2. **Due date:** Can be no further than 18 months into the future
3. **Completed date:** this should be populated only when the action has been fulfilled; user can come back to this screen and edit/add the completion date by using the “Edit Risk/Issue” function.

4. **Action Description:** Detailed information regarding the action to be taken
5. **Status Update:** this field should indicate the progress made towards the action described. User may fill it upon initial entry or later as part of action management.
6. **Final Outcome:** this field should be populated upon completion of the action
7. **Action Owner:** This will trigger a notification for the selected team member
8. **Function:** that the Action Owner represents or belongs to
9. **Action Status:** Upon initial entry will be set to “New” by default and grayed out.
10. **Update to trial document/plan required?:** Once ticked, activates the free text field to allow a document/plan requiring update to be recorded.
11. **New actions:** user can continue adding actions, or
12. Click on the **‘Submit Action + Risk/Issue’** button for action and risk/issue to be submitted. You can also click the **‘Save Action, return to Risk/Issue’** button to go back to the risk/issue. Be sure to click **‘Submit’** on risk/issue entry page once all edits are completed.

Action Log ✕

Note: Patient / Subject numbers are not allowed in FIRST

1	Created Date 29-NOV-2021	Due Date * 09-Dec-2021	Completed Date Select Completed Date
Action Description * ⓘ Ensure data cleaning will be completed and documented properly (CAPA to be provided by ERT)		Status Update ⓘ Enter Status Update	Final Outcome ⓘ Enter Final Outcome Details
Action Owner * ⓘ Rebecca Wolf		Action Owner Function * Data Operations	Action Status Ongoing

NOTE: If you are a CTT member working in the trial level register, this risk/issue will go to the trial waiting room for acceptance or archival by the Study Lead / Study Lead delegate.

8. How to Copy a Risk/Issue

It is possible to copy an existing risk or issue from one entity value to another. This process starts in the **Homepage**

1. From the **Home Page**, select the appropriate **entity (1)** (Trial, Project, or Supplier), avoid selecting the “All” checkbox, as this will delay the download of data. Then select a **Value (2)** from the drop down list that you want to receive the copied risk or issue and click on **Copy Risk/Issue (3)**

The screenshot shows the FIRST application interface. On the left is a sidebar with 'Home' and 'Summary' buttons. The main area has a 'Select Entity' dropdown (labeled 1) with options: Trial (selected), SL, SL Delegate, CTT, Project, Country, Supplier, and All. Below it is a 'Select Value' dropdown (labeled 2). To the right of the dropdowns is a 'Copy Risk/Issue' button (labeled 3).

2. From the **Copy From** screen, select the **entity (1)** from which you want to copy risks/issues and the **Value (2)** (e.g. specific trial). User can also search for specific records using the **Search Bar (3)**. User can select multiple values to copy from.

NOTE: Risks/Issues can only be copied from within the same entity (e.g. from one trial to another). For cross-entity risks/issues, the Roll Up, Down, and Over feature should be used.

Copy From

Cancel

Confirm

NOTE: At a trial level, if user is CTT member, the copied risks/issues will go into the entity's waiting room for acceptance or archival. If user is an entity manager, the copied entries will be placed automatically under the corresponding Survey or Register.

9. How to Convert a Risk into an Issue

If an existing risk turns into an issue, user can easily convert that risk into an issue. This process starts in the **Risk/Issue Survey or Register** screen.

1. From the **Survey or Register**, click on the **3 dots (1)** and from the menu, select **“Convert to Issue” (2)**.

2. User will be prompt to confirm the conversion to issue.

3. If there is one or more ongoing actions associated to the risk, user with the following prompt that will transfer the ongoing action(s) to the issue and also close the risk.

4. On the Type of Entry Tab, user should go to **“Risks Converted to Issues” (1)** and find there the entry that was just converted into an issue **(2)**. Finally, to the right of the entry, an **icon will indicate** how many times that risk has been converted into an issue **(3)**.

10. How to Roll a Risk/Issue Up, Down, and Over

It may be necessary to roll a risk or issue from one entity to another entity. This process starts in the **Risk/Issue Survey or Register** screen.

The roll up/down/over functionality is to be utilized to share a risk/issue across entities, **NOT** as a mechanism for escalation.

- Ø A risk/issue should be rolled up to a parent entity if the user thinks the risk/issue may have broader implications and be assessed by the parent registry manager.
- Ø A risk/issue should be rolled down to one or more trials if required that the CTT should assess and potentially take specific actions to mitigate that risk/issue for their particular trial.

For escalations, it is recommended to use the action functionality associated to the risk/issue.

10.1 Roll Up (from trial-level to parent-level)

- From the **Survey or Register**, click on the **3 dots (1)** and from the menu, select **“Roll Up” (2)**

The screenshot shows a table of risk/issue entries. Entry R003 is selected. A dropdown menu is open, showing options: Edit, Roll Up, and Convert to Issue. The 'Roll Up' option is highlighted with a red box labeled '2'. The three dots menu icon is labeled '1'.

- From the dropdown select the Entity to which entry is being rolled up, i.e. Country

The screenshot shows the 'Select Roll-Up Value' dialog box. The 'Select Entity' dropdown is open, showing options: Project, Country, and Supplier. The 'Country' option is highlighted with a red box.

NOTE: The new country-level registries will not be immediately implemented therefore do not roll up to Country.

- Next, select the **value(s)** within the entity (e.g. ABL001A) to which the risk/issue is being rolled up. User may select multiple **values**.

Finally, click **Submit**.

The screenshot shows the 'Select Roll-Up Value' dialog box. The 'Project' entity is selected. A red box highlights the 'ABL001A' and 'ABL001B' values. A red arrow points to the 'Submit' button.

- The system will prompt user regarding successful completion of the process

Successfully Rolled-Up

5. The Rolled Up entry will be moved to the parent-level Waiting Room for the entity's manager to approve/archive.

Home > **Waiting Room** → Risks Issues Archive

4. User will see confirmation that the action was successfully completed

Successfully Rolled-Down

5. Rolled down entry will be sent to the Trial Level Waiting Room for the SL/Delegate to accept or archive

NOTE: Risk/Issue ID will be updated to match the numbering in the receiving Survey or Register upon acceptance

10.3 Roll Over (from project-level to project-level)

1. From the **Project Level Register** click on the **3 dots (1)** and from the menu, select **“Roll Over” (2)**

2. The Roll Over screen will show the Risk/Issue ID and Category of the **rolled down entry (1)** and the **Risk/Issue Statement (2)**. User **select the Entity** to be rolled down to from the dropdown (3)

3. User will see confirmation that the action was successfully completed

4. Rolled Over entry will be sent to the corresponding waiting room, with a double pointed side arrow icon to indicate that the entry has been rolled over:

Action	Created date	Status	Action Owner	Function	Description	Due Date	Completed Date	Status Update	Final Outcome
1	10-APR-2020	Ongoing	Rebecca Wolf	GDD – Trial Management	Follow up with regulatory contact to determine options.	01-MAY-2020	--	Meeting planned for 19-Apr-2020	--

11. How to Edit Risks/Issues and Manage Actions

This process starts in the **Risk/Issue Survey or Register** screen.

From the **Home Page**, click on the quick access button to the Survey or Register you want to work from:

11.1 How to Edit a Risk/Issue

1. Locate the risk/issue you wish to edit and click on the button with **3 dots (1)**:

2. This will open up a menu of actions, click on the first one, **Edit (1)**:

3. The Edit Screen will allow you to modify all the fields of the original entry + Action Log
 - Ø Risk or Issue category
 - Ø Risk or Issue status (from Open to Closed and vice versa)
 - Ø Risk or Issue statement
 - Ø Risk or Issue Classification (*score for Detectability, Probability, Impact + Risk Control Strategy*)
 - Ø Action log

NOTE: If entry was edited at trial register level by a CTT member, the edited risk/issue goes into the Waiting Room for SL/Delegate to accept or archive.

If edits are made to a risk/issue in the Survey mode, edited risk/issue does not go into the Waiting Room.

While an edited risk/issue is in the Waiting Room, the risk/issue cannot be further updated until it is accepted into the corresponding Survey or Register. The action log area will still be available for adding a new action or editing an existing one.

11.2 How to Manage Actions

This process starts in the **Edit Section** of the Risk/Issue Survey or Register screen

1. Actions are managed in the **Action Log**.

To add a new action, click on the “+” sign (1).

To edit an existing action, click on the **pencil icon (2)** to the right of the action, this will allow you to edit all the fields in the original action and add a completion date that will automatically affect the status of the action.

An action can also be **deleted** by clicking on the **garbage bin button (3)**.

The screenshot shows an 'Action Log' table with the following columns: #, Created Date, Action Status, Action Description, Action Owner, Function, Due Date, Completed Date, Status Update, and Final Outcome. A single row is visible with ID 1, created on 29-JAN-2020, with status 'Ongoing'. To the right of the table, three callouts are present: (1) a '+' icon for adding a new action, (2) a pencil icon for editing an existing action, and (3) a trash bin icon for deleting an action. Below the table are 'Cancel' and 'Submit' buttons.

11.3 How to Close an Action

Following the successful completion of mitigation activities related to an action, the user should record if action impacted the risk level (e.g. improved risk score) or action not implemented in the 'Final Outcome' field. Also add the completed date if not that day. Upon clicking the '**Submit Action + Risk/Issue**' the action will automatically populate that date as the completed date and change the status of the action to 'completed'.

The screenshot shows the 'Action Log' form for action ID 1. It includes fields for Created Date (28-APR-2020), Due Date (21-May-2020), Action Description (Ship new supplies to US depot by 30-May-2020), Status Update (Enter Status Update), Action Owner (Rebecca Wolf), and Action Owner Function (Global Clinical Supply). The Action Status is 'Ongoing'. The 'Final Outcome' field is highlighted with a red box and labeled '1', containing the text: 'New supplies received at depot at 29-May-2021; received at site on time to mitigate risk (no impact)'. At the bottom, three buttons are visible: 'Cancel', 'Save Action, return to Risk/Issue', and 'Submit Action + Risk/Issue', with the latter highlighted by a red box and labeled '2'.

If there are no other ongoing actions, user will receive a popup to provide the option to also close the risk/issue:

The screenshot shows a confirmation popup with a yellow warning icon. The text inside reads: 'This action and all others are now complete. Would you like to close the risk/issue as well?'. At the bottom, there are two buttons: 'Yes' and 'No'.

If 'Yes' is selected, user will get a '**Status Justification**' popup where the rationale for closure must be selected from a list of values. User has option to indicate '**Other**' which will launch a free text field. User then clicks '**Add**' and the action will be completed and the risk/issue closed.

Status Justification

No Data Available

Risk controlled

Risk no longer Present

Issue Resolved

Risk/Issue Added in error

Other

Select Reason

Add

Cancel

If ‘No’ is selected, the action will be completed and risk/issue will remain open/re-opened.

In both instances, the action details will be updated accordingly:

#	Created date	Status	Action Owner	Function	Description	Due Date	Completed Date	Status Update	Final Outcome
1	28-APR-2020	Completed	Rebecca Wolf	Global Clinical Supply	Ship new supplies to US depot by 30-May-2020	21-May-2020	15-Dec-2021	--	New supplies received at depot at 29-May-2021; received at site on time to mitigate risk (no impact)

11.4 How to Close and Re-Open a Risk/Issue

Once the risk or issue is resolved and all actions (if applicable) are completed, the user can also manually change the status of the risk/issue to ‘Closed’ and click ‘submit’.

Home > Trial - Risk/Issue Register > Edit Risk/Issue

Risk/Issue *

RISK

Status

Open - No Actions Entered

Closed

Risk Statement

User will get a ‘**Status Justification**’ popup where the rationale for closure must be selected from a list of values. User has option to indicate ‘**Other**’ which will launch a free text field.

Status Justification

No Data Available

Risk controlled

Risk no longer Present

Issue Resolved

Risk/Issue Added in error

Other

Select Reason

Add

Cancel

The risk/issue will then have the status of 'closed'.

12. Summary Dashboard

The Summary is user specific, and user will have to choose an entity and a value for the information in the Summary to display.

- From the **Home Page**, select the appropriate entity **(1)** (Trial, Project, Country, or Supplier), avoid selecting the “All” checkbox, as this will delay the download of data. Then select a **Value (2)** from the drop down list and click on the quick access button to the **Summary (3)**.

Copy Risk/Issue

After user selects a value and goes to the Summary Dashboard, they can see all of the associated risks, issues, and actions.

Ref	Field/Button	Description
1	Legends	On the upper section, we see the Legends, indicating how many risks and issues are open and how many are closed, as well as actions that are opened, closed and past due.

		Data in the Legends section is not clickable. The Legends section will appear on the Summary Dashboard, the Risk/Issue Survey, and the Risk/Issue Register.
2	Filters	In this section user can filter their search criteria by category, status, creator, action owner, Score, and action status.
3	Risk/Issues Summary	On the Risk/Issue Summary, user can see the total amount of Risks, the total amount of Issues, and how many actions are associated to them. There is color coding indicating the risk/issue score: Green for Low, Yellow for Medium, and Orange for High Guidance regarding Risk Scoring can be found in by clicking on the “Help” icon in the Legends section.  The numbers in this section are clickable, and by clicking on them user will navigate directly to that specific risk or issue in their corresponding survey or register.
4	Risk/Issues in Waiting Room	The next section is a summary of the risks/issues in the waiting room, user can view how many new or edited entries are waiting for approval , how many have been rolled down, how many have been accepted or archived. On the parent-level Waiting Room Summary, the New/Edited data will be grayed out and the Rolled Down section will change to Rolled up.
5	Metrics	On this section, user can view how many risks, issues, and actions have been entered in the last month, how many risks and issues do not have any actions assigned to them, actions completed for risks and issues, as well as how many risks have been converted into issues. These entries are clickable, so user is able to navigate directly to the corresponding survey or register by clicking on them.
6	Action Aging	On this section, user can see how many risks and issues have actions that are overdue, how many have actions that are approaching their due date and how many have actions that are due in more than 30 days. Data in this section is clickable and user is able to navigate directly to the corresponding survey or register by clicking on them.

13. Transactional Audit Report

To access the Transactional Audit Report, from the **Home Page**, click on the quick access button, it is **not required** to select an entity.

The transactional audit trail records all actions performed in FIRST, regardless of entity. An enhancement of this new layout is that it allows each record to be expanded for user to view more detailed information, such as role, risk/issue ID, creation date, modified field, old data, new data and modified date:

View of entry before expanding:

Division	DU	Indication	Program	Project	Trial	Trial Status	Trial Phase	User Name	Category	Type	Country	Supplier	Screen Type
Pharma MA - Local	P4 Neuroscience	Relapsing-remitting multiple sclerosis				--	Phase III		Safety - IMP/Class profile	Update	--	--	Risk Survey

14. Reports, Trends, and Patterns

To access the Reports, Trends, and Patterns section, from the **Home Page**, click on the quick access button, it is **not required** to select an entity:

NOTE: Users will also navigate to this section if they click on a Trigger Words notification so user can view the metrics around those trends and patterns.

CT-QRM report needs to be generated from FIRST and filed by the study lead according to SOP-7042234 in the EOT checklist. The CT-QRM report filing and naming convention is as follows:

- Ø In CREDI: under “TMF (study level)” folder using the “Clinical Trial Quality Risk Management” document type. Document must be named “Clinical Trial Quality Risk Management report_Report date”. This document will be tracked under the HQ-TMF TOC section 2.7 Trial Management Plan.
- Ø In SubWay, under the study level artifact: “01.01.1601 Trial Risk Management Plan”. Document name will be automatically populated by the system upon document indexing (<artifact number><artifact name><document date>

Reports, Trends, and Patterns Dashboard

The recommended Zoom options for the Reports to be viewed correctly (using Edge or Chrome) is 90%.

Ref	Field/Button	Description
1	Register Bar	The section provides a view of various sections at an Entity level (Trial, Project, Supplier or Process/System), user can navigate from one to another. Each tab is register specific. Filters are carried over from one entity view to another, so it is recommended to clear them while navigating between tabs.
2	Filter Selection Bar	Shows all filters that are selected by user. These filters will carry over from one entity to another. User can clear/remove each filter individually.
3	Actions	There are four buttons in this section: Smart Search: user can type in entity value IDs, keywords, usernames, etc and system will display records that are found with that criteria

		 • Back: this button allows user to delete the very last filter/tab selected  • Forward: this button will restore the action that was cleared with the Back button  • Clear all: user can remove/clear all selected filters by clicking on this button 
4	Select Entity	Trial level is selected by default; however, user view can be switched between entities with these buttons. Each entity's button will affect all the graphics on the main page and the filters that are not applicable to a specific entity will appear cancelled-out. Example: if user selects "Project", the trial, phase, trial status, supplier, and primary service filters will be cancelled with red diagonal lines. 
5	Select Risk/Issue type	By selecting either one of these, user can update the information in all the graphs to show only risks or only issues. There are placeholders for Quality Related data (i.e., Quality Issues and Findings) which is not yet live.
6	Main Graphs	These 3 graphs showcase by default the following information at Trial Level: • Overall number of risk/issues entered into FIRST by type • Total number of risks/issues by status (Closed, Open, Re-open) • Total number of risks/issues by score (Low, Medium, High, No Score) The sections in each graph are clickable. When user click on a section, the rest of the graphs update to display the detailed information from that section,
7	Filters	This section allows user to filter the risk/issues by Division, DU, Program, Project, Indication, Trial, Phase, Trial Status, Supplier, Category, Primary Service, Scoring and others. When user selects any value within the filters, the main graphs will update real time to display the number of risks/issues within the selected value. User can expand the filters section to a full screen view by clicking on the "Full Screen" icon:

		 The full view will show all possible filters and user can select multiple values. <table><tr><th>DIVISION</th><th>SUB-CATEGORY</th><th>IMPACT CATEG...</th><th>SUPPLIER</th><th>PRIMARY SERVI...</th><th>SCORING</th><th>RISK CONTROL ...</th><th>ACTION OWNER...</th><th>JUSTIFICATION</th></tr><tr><td>DU</td><td>Accidental Unblind...</td><td>Budget</td><td>"Atlant Clinical", LLC</td><td>Ancillary Supplies</td><td>High Score</td><td>-</td><td>Clinical Developm...</td><td>-</td></tr><tr><td>PROGRAM</td><td>Ancillary Supplies ~...</td><td>Budget, Quality, co...</td><td>"Lingo", LLC</td><td>Archiving, Docume...</td><td>Medium Score</td><td>Accept</td><td>Data Operations</td><td>84Oct test for PQ...</td></tr><tr><td>PROJECT</td><td>Blinding and Unblind...</td><td>Budget, Quality, co...</td><td>"Safe Drug Service...</td><td>Auditing Services</td><td>No Score</td><td>Avoid</td><td>External Developm...</td><td>1112</td></tr><tr><td>INDICATION</td><td>Budget Maintenanc...</td><td>Budget, Quality, co...</td><td>"Trust", Individual ...</td><td>Bioanalytical Labo...</td><td>Low Score</td><td>Deflect</td><td>GDD - Trial Manag...</td><td>Abc</td></tr><tr><td>WP OWNERSHIP</td><td>Budget Set-Up & A...</td><td>Budget, Quality, co...</td><td>(Amplexor Life Sci...</td><td>Biomarker / Specia...</td><td></td><td>Mitigate</td><td>GDD - Trial Monito...</td><td>actions completed</td></tr><tr><td>TRIAL</td><td>Central Drug Avail...</td><td>Budget, Quality, co...</td><td>2KMM Sp. z o.o.</td><td>Biomarker Laborat...</td><td></td><td></td><td>GDD Quality</td><td>adding better data</td></tr><tr><td>PHASE</td><td>Clinical Study Rep...</td><td>Budget, Quality, co...</td><td>3D Communicatio...</td><td>Biosensors/ Wears...</td><td></td><td></td><td>Global Clinical Sup...</td><td>Alerts Testing</td></tr><tr><td>TRIAL STATUS</td><td>Clinical/Medical/S...</td><td>Budget, Quality, co...</td><td>3EF</td><td>Biostatistics and S...</td><td></td><td></td><td>MA Oncology</td><td>All actions comple...</td></tr><tr><td>RISK/ISSUE STATUS</td><td>Data Management ...</td><td>Budget, Quality, co...</td><td>4 Clinica</td><td>Cardiac Services</td><td></td><td></td><td>MA Pharma</td><td>all actions complet...</td></tr><tr><td>CATEGORY</td><td>Data Transfer</td><td>Budget, Quality, co...</td><td>4 Medicine Res Sp...</td><td>Case Report Form...</td><td></td><td></td><td>NIBR</td><td>all actions done</td></tr><tr><td></td><td>Data Transfer Spec...</td><td>Budget, Quality, co...</td><td>4G Clinical</td><td>Central Labs</td><td></td><td></td><td>NIBR - TM_Bioma...</td><td>all actions resolved</td></tr><tr><td></td><td>Database/EPlatform...</td><td>Budget, Quality, co...</td><td>23andMe</td><td>Clinical Document ...</td><td></td><td></td><td>NIBR - TM_Clinical ...</td><td>as needed</td></tr><tr><td></td><td>Database/EPlatform...</td><td>Budget, Quality, co...</td><td>AAC Global Denma...</td><td>Companion Diagn...</td><td></td><td></td><td>NIBR - TM_Discov...</td><td>asneeded</td></tr><tr><td></td><td>Database/EPlatform...</td><td>Budget, Quality, da...</td><td>ABX-Cro advanced...</td><td>Courier</td><td></td><td></td><td>NIBR - TM_Discov...</td><td>asda</td></tr><tr><td></td><td>Drug Distribution ...</td><td>Budget, Quality, da...</td><td>Actives</td><td>Data Management</td><td></td><td></td><td>NIBR TCO</td><td>ASDASDAS</td></tr><tr><td></td><td>Drug Management...</td><td>Budget, Quality, da...</td><td>Acurian BioSciences</td><td>Data Management...</td><td></td><td></td><td>Oncology</td><td>asdaad</td></tr><tr><td></td><td>Drug Management...</td><td>Budget, Quality, da...</td><td>Adaptive Biotechn...</td><td>Diagnostics (centr...</td><td></td><td></td><td>Reg Affairs</td><td>ASKASAS</td></tr></table>	DIVISION	SUB-CATEGORY	IMPACT CATEG... 8	Advanced / Derived Insights	Provides a variety of graphs, charts and other visuals leveraging trial level data and machine learning.																																																																																																																																																																		
9	Trends and Patterns	Trends will enable the user to look into the changes in the number of risks/issue/actions entered into FIRST across entities over a period. Trends tab in the reports shows the change risks/issues count over last 12 months. Patterns will enable users to see the number of issues or issue related actions entered into FIRST with certain trigger words (hyperlink this to the table with trigger words) over months at Trial, Project, Program, DU and Division level See 14.1 Trends and Patterns for further guidance																																																																																																																																																																		
10	Metrics and Reports	Metrics & Reports section will enable the users to get the high level number of risks/issues/actions entered/updated from their last review date to till date along with the customized reports per entity. See 14.2 Metrics and Reports for further guidance																																																																																																																																																																		

14.1 Advanced / Derived Insights

14.2 Trends and Patterns

Ref	Field/ Button	Description
1	Trends or Patterns	The Trends section will be the default view, user can switch to the Patterns view by clicking on this button
2	Select Entity	This dropdown will allow user to filter data by entity
3	Type entry of	This dropdown will allow user to select whether to see only data regarding risks or only issues
4	Graphics	The visuals in the Trends section will provide users information on the changes in the number of risks/issue/actions entered into FIRST across entities over a period of time for the last 12 months The main visuals that are available in this section are • % Risks/Issues by Category over last 12 months • Total risks/issues entered into FIRST for last 12 months • Risks converted to issues month over month over last 12 months • New, ongoing and completed actions over last 12 months • % actions by function over last 12 months • Median duration between risk/issue entry and action entry over last 12 months • Median duration between risk/issue entry and risk/issue closure over last 12 months If the user wants to see the % risk/issue in a category over last 12 months then user can select the category either from the filters or from the Category legend present for % Risks/issues by category over last 12 months visual and click on 'tick box' as per which all the visuals in the page will be changed

Patterns

14.3 Metrics and Reports

There are three sections inside Metrics and Reports, the Metrics view is set as the default one, user can navigate to Reports and Usage Reports by clicking on these buttons:

Metrics

Ref	Field/Button	Description
1	Select Entity	This dropdown will allow user to filter data by entity 
2	Type of Entry	This dropdown will allow user to select whether to see only data regarding risks or only issues 
3	Select “from date” and “to date”	Select from date would enable the users to select a date, ideally last review date from when they would want to view the risk/issue numbers To date is set to today's date by default
4	KPI section	This section would give users information on: • The issues with QUALITY ISSUE QE ID entered from the last review date to till date across entity or for a value selected by the user in the filters section • Risks/Issues with no actions assigned from the last review date to till date across entity or for a value selected by the user in the filters section • Ongoing risks/issues from the last review date to till date across entity or for a value selected by the user in the filters section

		• Risks converted to issues from the last review date to till date across entity or for a value selected by the user in the filters section • Median days to close risks/issues
5	Filters	Filters will enable users to select the values of their interest for a Division, DU, Program, Project, Indication, WP Ownership, Trial, Phase, Trial Status, Supplier, Category, Primary Service, and Scoring, which would update all the visuals in this section as per the selection made
6	Graphics	This section would give information to the user on: • The risks/issues entered per category from the last review date to till date across entity or for a value selected by the user in the filters section • The number risks/issues entered per scoring from the last review date to till date across entity or for a value selected by the user in the filters section • The number of risks/issues open for <30 days, 30-60 days, 60-90 days and >90 days from the last review date to till date across entity or for a value selected by the user in the filters section

Reports

Ref	Field/Button	Description
1	Select entity	These tabs would enable users to view the customized reports for the entity of their choice. Trial is selected by default in this view Selecting Project button would provide a view of customized reports at Project level
2	Reports Listing	This gives the view of the reports readily available for the users to be downloaded into an Excel
3	Search Icon in the reports	The  icon in each of the reports columns acts as filter & will enable user to select the values of their interest from the columns
4	Export to excel	Right click within the data table itself and three dots  will appear and give the user option 'Export', clicking on which will enable users to select 'Export data'.

After clicking on Export data, a pop up appears as below and after clicking on 'Click here to download you data file' an excel file with the data opens for the user to view the data in detail

Vizlib Container

Your exported data is ready for download
[Click here to download you data file](#)

Close

Usage Report

This section of the reports would provide the users information on the percentage of Project, Supplier and Trial teams accessing FIRST to enter & manage their risks and issues

Ref	Field/Button	Description
1	Project & Supplier level usage information	This section gives the information on the - Active Projects & Suppliers with risks/issues entered % they would contribute to the total Active Projects or suppliers and - the number of risks/issues associated with these projects or suppliers
2	Trial Level Graphics	This section of the usage reports would provide users information on the following: Division & DU level - Amount & percentage of Trials with risk/issue entries if FIRST (includes both trials in scope & trials out of scope) - Amount & percentage of Trials without entries in FIRST The trials that are considered in/out of scope of FIRST based on the below criteria

		Inclusion: - Ø NIBR trials : - o CTT Kick off Actual Date <Report date and (FPFV Actual/Plan date>28 Feb 2019 or is missing) and CSR Actual date not achieved - o If CTT KO actual date is missing, FP Actual date<Report date and (FPFV Actual/Plan date>28 Feb 2019 or is missing) and CSR Actual date not achieved - Ø Sandoz trials: - o FP Actual date<Report date and (CSR Plan date>31 Mar 2019 or is missing) - Ø All Other trials: - o CTT Kick off Actual Date <Report date and (CSR Plan Date >31 March 2019 or is missing) - o If CTT KO actual date is missing, FP Actual date<Report date and (CSR Plan Date >31 March 2019 or is missing) - Ø Strategy Approved Trials and Workpackage status = ‘Open’/‘Draft’ - Ø GDD/NIBR Division is merged into GDD, Onc MA – Global is merged into Oncology MA and Pharma MA – Global is merged into Pharma MA Exclusion : - Ø Local and Regional trials - Ø Investigator initiated/Third party trials - Ø Completed trials with no entries - Ø Any trials with CTT KO and FP actual dates missing - Ø GMA Trials - Ø Managed Access Program, Disease Registry, Compassionate use, HEOR, NoPHIS Special Notes: Any trials that are out of scope and have entries in FIRST (eg: Proposed Plan, Completed, Terminated Studies and NIBR trials prior to FPFV 01 March 2019 cut off) are shown in ‘Trials with Entries’ metrics as Trials not in scope
3	Trial-level detailed data table	This data table will provide the detailed information on the list of trials with entries (in & out of scope) and trials without entries in FIRST

15. Notifications and Alerts

The notifications and alerts section is located on the right side of the homepage

Notifications and Alerts Dashboard

Ref	Field/Button	Description
1	Types of Notifications	There are 3 types of notifications built into FIRST: - Ø Rapid Notifications alert the user that there is an open task that requires their immediate action, i.e. When they are assigned as an action owner. These notifications trigger an automated email to the user. - Ø Response Notifications alert the user that there is an open task that requires their action, but it is not urgent, i.e. Remind the user that they have 5 days to take action. These notifications do not trigger an automated email to the user. - Ø Information Notifications alert the user about updates made to the risks, issues, or actions in their assigned trials, but have no action required. These notifications do not trigger an automated email to the user.
2	Select All	This option allows user to select all the notifications and either mark them as “Unread” or delete them with “Clear All” option. IMPORTANT: If user selects all the notifications and clicks on “Clear All” they will prompted to confirm the action as it will irrevocably delete all the notifications:

		 Are you sure you want to delete selected notifications. This process cannot be undone. Submit Cancel
3	Notification	The actual notification is a clickable field, user can is able to navigate to the specific Risk/Issue associated with the notification.
4	Select Notification	User can select individual notifications and mark them as “Unread”. Notifications that have been “read” appear with a white background (1) and notification that are marked as “unread” appear with a colored background (2): 
5	Delete Notification	User can select individual notifications and delete them by clicking on the “X”, this process is irreversible so user will be prompted to confirm the action: 
6	Subscribe	This section allows user to subscribe to up to 10 alerts (see 15.1 for further guidance)

15.1 How to Subscribe to Alerts

This process starts in the **Home Page** screen.

1. From the **Home Page**, click on the “Subscribe” button (lower, right hand of the screen):

2. Select the **entity (1)** (Trial, Project, Supplier, Program, DU, Division) from the dropdown and the **Value (2)**, which is the actual ID of the entity:

A screenshot of the 'Subscription Alerts' form. It includes a header with a note 'User can subscribe up to 10 alerts'. Below, there are two dropdown menus: 'Select Entity' (labeled 1) and 'Entity value' (labeled 2). A 'Trigger Words' label is also present.

3. User may select multiple entities and values, for each one, there will be a separate tab (1) for user to navigate from one to another. Inside each tab, depending on entity/value, there will be a list of predetermined Risk/Issue Alerts for User to subscribe to (2). User may also subscribe to the entity/value's **Trend Alerts (3)**.

A Trend Alert will be sent based on the occurrence of defined trigger words per trigger category, in issues and their related actions is more than the set of frequency for Trial.

User can see a detailed list of trigger words per category and frequency of occurrence by clicking on **“Trigger Words” (4)**.

A screenshot of the 'Subscription Alerts' interface. It shows a 'Select Entity' dropdown set to 'Trial'. Below are two tabs: 'Risk/Issue Alerts' (labeled 2) and 'Trend Alerts' (labeled 3). The 'Risk/Issue Alerts' tab contains a list of alerts with checkboxes. The 'Trend Alerts' tab contains a single alert. A 'Trigger Words' link is highlighted with a red box and labeled 4.

Trigger Words for Trends

Trigger Words For Trends									
		Frequency of Occurrence							
	Category	Triggers (words in free text, listed in issues & their associated actions)	Trial	Indication	Compound	DU	Division	Impact (Low, Medium, High)	
1	Safety	Safety, SAE, AE, ICF, withdrawal, treatment failure, rescue medication, serious adverse event, adverse event, informed consent form, reporting	2	6	10	10	20	Low or Medium or High	
2	IMP	IMP, medication, dose, dosing, temperature excursion, unblinding	2	6	10	10	20	Low or Medium or High	
3	Data handling	EDC, electronic data capture, blinding, Source Documentation, system access, access, data integrity	1	1	1	1	4	Low or Medium or High	
4	Regulatory compliance	Non-compliance, Health Authority, Ethic(s) committee, fraud, scientific misconduct, inspection, serious breach, persistent, data privacy	1	2	4	4	10	Low or Medium or High	
5	Protocol compliance	Protocol deviations, PD, eligibility, criteria,	2	4	6	6	20	Low or Medium or High	
6	Vendors	Repetitive vendor name plus text within trial or vendor name across trial	2	4	6	6	10	Low or Medium or High	
7	Country	Same country name or initials	2	4	6	6	10	Low or Medium or High	
8	Operational	Budget, timeline, timelines, exceed, missed, delayed, slow, recruitment, enrollment, delay, milestone, postpone, postponement	2	6	10	10	20	Low or Medium or High	

4. User selects the alerts using the checkboxes:

Previous selected subscription 2

	Entity	Values	Alert selected
☒	Trial		Occurrence of defined trigger words per trigger category, in issues & their related actions is more than the set frequency for Trial
☒	Trial		Occurrence of defined trigger words per trigger category, in issues & their related actions is more than the set frequency for Trial

5. If already subscribe to alerts, those will be visible under the blue tab “Previous Selected Subscription”

Previous selected subscription 1

	Entity	Values	Alert selected
☐	Trial		Occurrence of defined trigger words per trigger category, in issues & their related actions is more than the set frequency for Trial

User can “Unsubscribe” by removing the checked alert and clicking on “Submit”.

6. User clicks on Subscribe and will be prompted that the subscriptions were successful:

7. When selecting Trial or Supplier entity, user has option to specify additional .

16. Admin Controls

To access de Admin Controls, from the **Home Page**, user must select an **entity (1)** and **value (2)** for which they have manager access:

Select Entity **1**

☒ Trial ☒ SL ☐ SL Delegate ☐ CTT

☐ Project ☐ Country ☐ Supplier ☐ All

2

x | v

After selection, click on the quick access button.

Note: User may only see the Admin Controls for the Entities for which they have Study Lead, Study Lead delegate, PTM, ESP Relationship Lead or Process/System Owner or Coordinator access.

2					Active	
3					Active	

Ref	Field/Button	Description
1	List of Users	User can view a full list of users that currently have system access to FIRST 2.0 (that have completed the mandatory training in U4G)
2	Search Bar	User can search for other users by typing in 5-2-1 or first/last name
3	Add User	User can add new users by using this option (see 16.1 “How to Add a New User”, page 49, for further guidance)
4	Action	User can update another user’s access (level and entities) (see 16.2 “How to Update a User’s Access”, page 50, for further guidance)

16.1 How to Add a New User

This feature is for users with management access to grant Trial/Project /Supplier access to specific entities.

1. From the Admin Controls Dashboard, click on Add User

Home > Admin

User Management

Search

Add User

2. Type in the 5-2-1 of the user you wish to add or their name/first name (field will display predictive writing). Upon selecting a user, the greyed out fields of name, last name, and email will automatically populate.
